

PEOPLE TRACKING SYSTEM

A Project created by Sterling Michel

Project Description

- **Overview**
- The **People Tracking System** is a unique online contacting system that **enable a person to store and plot their contacts in a map**. It allows the user the opportunity to search, share contact and understand where in the world are their friends and family located.

Cool Features

- Contact Search
 - User will have the ability to perform search.
- Contact Map Display
 - User Will see their contact plotted on the map.
- Contact Sharing
 - User will have ability to share the information as a contact file.
- Contact Rating
 - User will have the chance to rate their contact flag it as family, business or friend.

Design Challenges

- Integrating with Google OAuth
- Integrating with Google Map limitation
- Using plugin to help generate contact information
- Choosing proper REST API backend programming language
- Integrating with Google Gmail API

TECHNOLOGY

TECHNOLOGY - UTILITIES

HTML/CSS/Javascript

Advantage

- Lightweight
- Easy to edit
- Improved semantics
- Compatibility Across Devices
- Better User Experience
- Faster Page Speed

Disadvantage

- Browser Compatibility
- Lack of Security
- Performance Impact
- Overriding Styles
- Maintenance Challenges.
- Limited Layout Control.

Jquery

Advantage

- Cross-Browser Compatibility
- DOM Manipulation
- Ease of use
- Simplified Syntax

Disadvantage

- Abstraction Layer
- ES6+ Features
- Can hinder your understanding

Jquery-UI

Advantage

- Integration
- Maintenance friendly
- Theme mechanism
- Browser support
- Documentation
- Plugins
- Flexible styling and themes

Disadvantage

- Can be a bit confusing
- Lot of the DOM/CSS manipulation

Github

Advantage

- Easy to use and learn
- Impressive web client
- End-to-End secure over ssh or https
- opensource and or pay account
- Simple CLI

Disadvantage

- Require some advance knowledge
- Pay account is higher than competitor

Jira

Advantage

- Multi users with collaboration, level access and information sharing
- Easy to document project and coordinate tasks
- Lots of reporting features with real-time communication
- Customizable and has plugin integration

Disadvantage

- Cost a bit high to purchase
- Too many functions, could get lost

VS Code

Advantage

- Versatility to use with such as editing and viewing markdown files
- Speed with lightweight editor that starts as a basic text editor, making it faster and more responsive
- Cost-effective for freelance developers and smaller teams
- Easy Plugin Extension with including IntelliSense, debugging, Git integration, and a highly customizable interface
- Development operations with development operations like debugging, task running, and version control.

Python Flask With Async

Advantage

- Non-blocking I/O
- Fast Execution
- Scalability
- Large Ecosystem with active Community
- Caching
- Cross-Platform
- Fast Development

Disadvantage

- Not Ideal for CPU-Intensive Tasks
- Unstable API
- Security Risks
- Asynchronous Programming Model

Swagger Framework

Advantage

- Real-time applications
- Extensive documentation
- Integrates with front-end frameworks
- Supportive community
- Easy to learn

Disadvantage

- Pre-built packages
- Mobile web-apps

MongoDB

Advantage

- Cloud-based
- Flexibility
- Speed
- Cost-effective
- Scalability

Disadvantage

- Data redundancy
- Memory usage
- Limited document size
- No transactions
- Not recommended for relational data

TECHNOLOGY – UI DESIGN

Testing

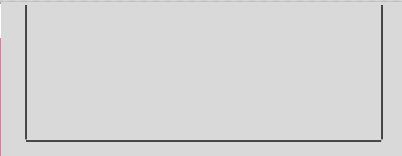

- Testing framework (Nodejs), using Mocha For frontend, (Python) using PyTestSuite for backend
- Testing create into database
- Testing delete into database
- Testing Plotting location into UI webpage
- Testing rest api endpoint

DOCUMENTATION

- Documentation created using Swagger API and manual entry
- Important code sections given in-line comments to describe functionality

PROJECT PRESENTATION
